¹ It is not recommended to print the professional papers Crystal Archive Type DPII and Pearl Papers on Frontier 500.

² First generation of Frontier 700, 710 and 720 need a modification to enable them to process the professional Crystal Archive DPII and Pearl Paper.

³ For FUJICOLOR Crystal Archive **Pearl Paper** on Fujifilm Frontier systems 3x0 and 5x0 the Paper LUT installer **Type "r"** must be installed (A3 Version 1.0-0X-018 Type r)

⁴ Album Paper is thinner than all other photo papers. Under some conditions of temperature, humidity and printer maintenance a proper paper transport cannot be guaranteed in the printing and in the processing part. Especially for minilabs with single sheet processing a proper paper transport in the printer part cannot be guaranteed under low humidity conditions. Frontier 750~790 are compatible with Album Paper under special condition. LUT **C-1** must be used.
